Subject: Questions about IN draft GP for Groundwater Petroleum Remediation Systems

Brian:

I believe that you are the person who reviewed our draft general permit for Groundwater Petroleum Remediation Systems. We had initially limited the scope of the GP to gasoline remediation based upon questions raised by you with respect to the effluent parameters contained in the draft permit. During the public notice comment period several folks asked if we would consider expanding the scope to include diesel fuel and kerosene and such, so we are in the process of investigating what other effluent limits would be necessary to accommodate these requests. Would you have any time available in the next week or so to discuss this matter, or if not, could you recommend another Region 5 staff person with whom we could have a phone discussion?

Thanks,

Catherine Hess
